Digital Storytelling – Steps to create your story

adapted from: http://www.techsoup.org/learningcenter/training/page5897.cfm

What is your story? Is it about ... someone important to you? an event in your life? a place in your life? who you are? what you believe? what you do? a challenge you have overcome? or is it about someone else and one of their stories?

How do you tell your story?

(one) write your script/narrative: be personal, be short, be real, have a beginning, middle, end, work on the pace; pause, breath, trust your voice, and finally read aloud to yourself and others.

(two) gather resources: photos (older the better), text, mementos, "found materials", etc.

(third) gather equipment: computer, scanner, computer microphone, digitalized music, software (<u>PhotoStory</u>, <u>Windows Movie Maker</u>, <u>VoiceThread</u>, <u>Animoto</u>, or other)

(fourth) create a storyboard: plan out your story, time - what happens in what order?, interaction - how does your music, voice, and images work together?, good rules of thumb (no more than 15 pictures, at most 2 minutes, ideal time to show an image is 4-6 seconds - some may be longer)

(fifth) digitize your media: plan a good amount of time for this, scan as JPEG (JPG) images, and at least 720x540 pixels.

(sixth) record your voice-over: may use an external microphone attached to a computer or the built in microphone on the machine and you may want to use <u>Audacity</u> (free) to record and edit your recording.

(seventh) pull it all together: use <u>PhotoStory</u>, <u>Windows Movie Maker</u>, <u>VoiceThread</u>, <u>Animoto</u> and don't forget: titles at beginning and end, text overlays on images, transitions between images, and add music LAST and then work on the timing and fade ins and outs.
