

# How to Use Windows Movie Maker to Resize a Video

**1** Choose Import video in the Movie Tasks (left side of screen). If you already have your video open in WMM skip to step 3.

**2** Select all the pieces of your video (Ctrl+A). Click and drag them down to the timeline.

**3** Click Save to my computer under Finish Movie.

**4** Give your video a name - I usually add Resized to the end of the title. Browse to the destination to save the file.

**5** On the next screen choose Show more choices...

**6** **Movie Setting**  
Select the setting you want to use to save your movie. TI determines the quality and file size of your saved movie.

Use the arrows to determine the File Size you want to set. 9MB is fine for uploading to our SharePoint pages. Click Next and your resized video will be created.
